

Leading the World in Food and Consumer Product Safety Compliance

Decernis Represents the Supply Chain With Users in Forty-Six Countries

Decernis provides a global compliance intelligence framework that includes both content and applications to manage food and consumer product safety compliance worldwide.

Decernis clients include:

- Governmental agencies (e.g., FDA, EU JRC, EFSA, OECD);
- Upstream manufacturers;
- Downstream manufacturers, including food and beverage;
- Law firms, laboratories, and universities.

Decernis also works directly with governmental agencies in order to support effective compliance with reduced cost, effort, and complexity. Decernis provides a common operating picture for management and consistency across the enterprise. The client can also securely integrate his or her own document libraries and databases to provide one knowledge management system using Decernis technology.

Our global coverage of 120 countries and 13 economic communities includes over two hundred and fifty topics and subtopics, such as:

- Food standards, food and feed additives, food contact, flavors, colors, packaging, labelling, prohibitions and restrictions;
- Consumer products, cosmetics, toys;
- Contaminants;
- Environmental, health and safety; and,
- Toxicology, including cooperation with FDA, OECD, and RTECS.

Global Compliance Intelligence

The Decernis Advantage

Reference: Determine your compliance obligations with Decernis' **gComply**, which is a web-based database and library covering 120 countries and 13 economic communities. gComply also provides a common and secure knowledge management system for the client private document libraries. gComply is multi-lingual, contains over 45,000 regulations and covers hundreds of thousands of chemicals and commodities.

Early Warning: **Decernis News** provides daily monitoring of proposed and final regulatory notifications, scientific options, product recalls and warning announcements. It's customized to track individual substance lists and composition data against any news item. Decernis links company and third-party sources of information into one central early warning system.

Decernis Issue Management offers an application platform for group management of dynamic compliance issues and alerts, categorized by topic, affected product, and group (e.g., senior management, quality, production, regulatory).

Enterprise Integration: Decernis **gComply Plus** provides a compliance reporting environment that can be integrated with the client's enterprise systems for composition and formula management, order-entry, and customer/supplier systems. For example, gComply Plus has been deployed to provide coverage of and automated reporting for customer questionnaire and customer standards that has proven to result in a dramatic reduction of time and effort, yielding an increased responsiveness to the client.
